System and Network Administrator

Our team is currently looking for someone who likes to take responsibility. In particular, the IT infrastructure of our company. This would entail designing, implementing and maintaining the Hardware and Software landscape of the Avaloop office, as well as plan together with the development team server systems for services provided by Avaloop. Therefore establishing a monitor and notification system belongs to your job description as well.

Interested in this position? We look forward to receiving your application via email or mail and please be sure to add the earliest possible start date.
